Hello,

I need to do some hard things on lots of Domain Controllers.
The size of the NTDS.DIT is growing every year. It is now about 1Go.
It is normal, because there lots of turn over.

1 – I would like to know if it is possible to start W2K offline of AD automatically. If it is so, I could send a script to defragment the NTDS.

2 – Is somebody knows how to create or move partition with WHS. I know that Volume Manager do it well, but it is quite expensive on more than two hundred DC. (I did not find any exemple on Microsoft Script Center web site)

Thanks for your help
