testing migration from company.com to company.local, (Interforest, source and target domains are Win 2K in native mode)involving 2 DCs, a terminal server, an Oracle database server, a Lotus Domino server and about 45 users, some with Windows 98 SE, most with Win 2K Pro, some with XP Pro.

Errors each step of the way. E.g. No access – when test migrating the Oracle server computer: Migration agent could not be installed.

Does someone have experience with the Migration Tool?
