Account lockouts are in the "urgent replication" category but urgent replication only occurs within a site. Urgent replication does not cross site boundaries. When a user account is locked you should reset the users account on a DC within that users site. Are you forcing replication between sites after the account has been unlocked?

The links below discuss urgent replication

Search the following link for the word urgent to view the section on urgent replication

<http://www.microsoft.com/resources/documentation/windows/2000/server/reskit/en-us/distsys/wsrvdys.msp>

232690 Urgent Replication Triggers in Windows 2000
