> *I have a question on group policies. I have created an OU that contains only our IT department. I added a group policy for passwords, and I linked the OU to this policy.*

Password Policies (and everthing in Security\Account Policies, i.e., Lockout and Kerberos) are PER DOMAIN policies and have no effect on domain logins unless linked to the Domain.

Actually you "linked the GPO to the OU" (not the other way around.)

>*I also added our IT group under the security filtering box. This password policy is set to enforce a password change – minimum days is 1, and maximum days is set to 5 (just for testing purposes). I enforced the group policy, but none of us have been warned of our passwords expiring or to change it.*

> *This is the first policy we are trying to put in place, but I cannot figure out what is wrong. I have read everything there is to read on group policies. there are no other policies that could be interfering. I checked the no override, and everyone has read and apply group policy rights.*

Domain only policy.

> *Any idea what step I'm missing? Your assistance would be greatly appreciated!!*
