Have a large campus 6000 plus nodes. Looking for a solutions that works with AD that will track all network, server, workstation resource usage by users. Must have great reports and included swipe card with cash/usage (Printing costs, Network charges) tracking and finger print logon.

Would like to have the ability for automatic user account creation when cash deposit placed on swipe cards.

Think about the Sky lodge question from the exams and extend it a bit to a pay as you go computer usage. IE you print you pay, you browse you pay, you save a file you pay.

Any Ideas would be helpful.
