Logon as the guest, and type "runas /noprofile /user:compName\administrator mmc" without the quotes in the run command.

Enter the administrator password when prompted and then add the computer management snap-in to the MMC console. Create a new administrator account to troubleshoot with or just check the policy to ensure you've not locked yourself out as stated by Dennis.

In group policy you enabled "Deny log on locally". This blocks you local logon rights.

Try to use the RESOLUTION part of this KB to solve.

"The local policy of this system does not permit you to logon interactively" error message when you try to log on to a computer that is running Windows Small Business Server 2003 by using an Administrator account
