You could use restricted group

This user/group is a member of

Only apply it to the specific machine. Since it is only for 1 machine it is not a good idea to use a gpo. I would stick with doing it manually.

Computer Configuration

Windows Settings

Security Settings

Restricted Group

Group – Blah Blah is a member of Administrators

Unless you restrict this to a specific machine this group (Blah Blah) will be a local admin of all machines that apply this gpo
