Hello Everybody,

i have a domain like DomainA.com (W2K DC) and installed a new domain like DomainB.local (W2K3 DC) in the same Forrest but not as a child domain. Now i migrated all Users etc. to DomainB.local. The goal is, to completely remove the DomainA.com. But i cannot uninstall the last DC in DomainA.com. Any Ideas what to do?

Also is it possible that the Forrest is named like the first Domain which was existing? Is it possible to rename the Forrest to the name of the new Domain?

brgds Daniel
