I have one Windows 2003 Active Directory domain with Windows XP and Windows 2000 client workstations. I created a group policy to enable strong passwords according to the instructions at http://www.microsoft.com/technet/security/smallbusiness/topics/networksecurity/enforce_strong_passwords.mspx.

However, the policy is not applied to any of the workstations. I confirmed this by running rsop.msc on several workstations and saw that the policy was not being applied.

What is it failing?
