I have several DHCP servers running on domain controllers, all in one domain. The Domain controllers are centrally managed from corporate; however, I would like to allow the remote site administrators to manage the DHCP server at their site. How do I go about delegating this?

If I put a user in "DHCP Administrators", the user can manage all the DHCP servers that are DCs. Is there a way to restrict access, so that a user can only manage DHCP on a specific server?

.
