Hi

for more info on this see also:

<http://www.microsoft.com/technet/prodtechnol/windowsserver2003/library/ServerHelp/46eafb5c-014b-4f28-b2c1-2>

you are correct. Because DHCP is on a DC, putting a user in the DHCP Administrators in the domain those users will be able to manage all DHCP server on the DCs. Those admins however cannot introduce new DHCP servers because these need to be authorized first by an enterprise admin.

Another thing.... When DHCP is on a DC it is best to configure DHCP with a user account to register client IPs. This is especially needed on DCs otherwise the records the DC register might be endangered! See: <http://support.microsoft.com/?kbid=255134>. Although the article is for 2000 it is almost the same for 2003. The main difference is that 2003 offers a GUI to configure the account

Cheers,
