What is the best way to lock out an account on the server while the person is still logged on? With out disconnecting the users NIC cable or from the switch. Someone is getting ready to get fired and we want to terminate their server access while still giving them access to their computer. Disabling their account, removing group memberships, and logon times didn't seem to help lock down file server access. Any help would be appreciated, thks.

server 2003 AD
XPpro wrkst
