Hello:

After a series of errors due to to many people having domain admin accounts I have finally decided to run the Delegation of Control wizard and restrict users access. I created a group and want to only allow them to do the following.

1. Join Computers to the domain
2. Move computers between OU's
3. Reset user passwords
4. Create Exchange Mailboxes
5. Add and remove groups to users.

I tried to use the Delegation of Control wizard but it didn't seems to give me these options. Does anyone have experience running this who could help me out. Thanks.

Harrison Midkiff
