Hello, I have problem with gpo which I can't resolve from little time. The problem is that computer policy for domain computer is not applied. The main error in event log is:

System Windows nie może uzyskać dostępu do pliku gpt.ini dla obiektu GPO  
cn={96E16FDE-597D-4543-9628-77803E76A2A0},cn=policies,cn=system,DC=domena,DC=local.  
Plik powinien znajdować się w lokalizacji  
<\\domena.local\sysvol\domena.local\Policies\{96E16FDE-597D-4543-9628-77803E76A2A0}\gpt.ini>.  
(Odmowa dostępu. ).  
Przetwarzanie zasad grupy zostało przerwane.

This means Access denied. But then I checked the Group Policy Management Console that informs me that just

```
Component Name Status Last Process Time
Infrastruktura zasad grupy Failed 2005-10-10 11:38:47
Infrastruktura zasad grupy failed due to the error listed below.
```

Określona domena nie istnieje lub nie można się z nią skontaktować.

Note: Due to the GP Core failure, none of the other Group Policy components processed their policy. Consequently, status information for the other components is not available.

Additional information may have been logged. Review the Policy Events tab in the console or the application event log for events between 2005-10-10 11:38:25 and 2005-10-10 11:38:47.

Transaction:

Infrastruktura zasad grupy – infrastruktura zasad grupy  
Określona domena nie istnieje lub nie można się z nią skontaktować. ->  
specified domain does not exist or can't be contacted.

But when I try from computer name step into shared folder  
\\domena.local\sysvol\domena.local\Policies\{96E16FDE-597D-4543-9628-77803E76A2A0}\gpt.ini  
I can without any problem.

Does anybody have an idea what can be wrong?

regards  
Paweł Mylka
