are you saying you cannot login with the default administrator account?

on try the following...

boot the DC into SAFE MODE WITH NETWORKING

logon as the default domain administrator account....

open ADUC... and move the computer account back... reboot...

are you sure only thing that happened was that the computer account was moved from the default domain controllers OU to the computers container? anything else?

I cannot login as it tells me that the group policy does not allow interactive login. Another person told me of a tool that I could use that was suppose to allow me to make sure that interactive rights were set, but

Re: Where is the information regarding the domain controller store

Re: Where is the information regarding the domain controller store

this program errored out.

The only way that I can login is to go into Directory Services Repair.

This

keeps me from doing a lot of AD type stuff as it is not on any domain.

The server is a W2k.

If there is some way I could fix this without going through a repair or reinstall that would be terrific.

I do have another machine that I can install W2k on. I was wondering if I could make that a DC for the same domain and somehow copy the domain info to the problem machine. Does this sound doable?

"Jorge de Almeida Pinto [MVP]" wrote:

are you saying that by mistake the computer account of the DC was moved from the Domain Controllers OU to the Computers container?

what is the error you are seeing? OS?

you should for an example be able to logon to the DC with the default administrator account, move the computer account back, open a command prompt windows and run GPUPDATE /FORCE (assuming we are talking about a w2k3 DC) (if it is a w2k DC run SECEDIT /REFRESHPOLICY MACHINE_POLICY /ENFORCE and SECEDIT /REFRESHPOLICY USER_POLICY /ENFORCE)

The domain controller server got moved from the domain folder to the computer folder. This has resulted in not being able to login interactively to that server. I was thinking that the easiest way would be to, some how, access the folder location and move it back.

Don't laugh!

I was hopin' that there was
some way to change
something in there.

Is there anyway to modify
the database?

What
information?
Do you
mean the
info for
Active
Directory
itself?
If
so
that
is stored in
NTDS.DIT,
you won't
have much
luck
looking at it
though,
it
isn't
like it is a
clear text
file, it is an
ESE DB.
