Hi Vincent –

I used Netdom to reset the account and the utility acknowledged that the secure channel was reset, but it didn't fix the problem.

I'll try removing it and then adding it back to the domain, but I will have to coordinate that with the server admin, because of the reboot. If that doesn't work I think I next will try loading the default security template to see if that solves it.

Thanks.

"Vincent Xu [MSFT]" wrote:

Hi,

I agree with you that we may have a try to reset computer account. Please let me know the results and I will be glad to provide assistance.

Best regards,

Vincent Xu

OK, I guess it was worth running sidtoname, if only because
it adds to

the

weirdness. It gives an error and reports that the trust
relationship has
failed between the domain and workstation. That makes no

RE: SIDS show instead of user names

sense at all
because I can log on with a domain account and I can still
add users to
groups and ACLs and administer remotely and there are no
errors in the

Event

Logs.

If I look at the same SIDs from my own workstation using
sidtoname, I can
resolve them. If I do the same, but append the name of the
problem

server, I

get the same error message as above.

Here is some other info:
Speaking of Event Logs, user names show as SIDs until I
open an event.

Once

the box opens for the event the user name shows, but only in
the

Description

section.
This problem is not 100% consistent; once in a great while I
come across

a

user name instead of a SID in a local group, but there are
very few and

the

name is always followed by the SID. If I add one of those
users to a
different group I get the same result; I see the user name
(followed by

the

SID).

Maybe we can simply try removing and rejoining the

RE: SIDS show instead of user names

machine to the domain

or

use Netdom to reset the account (even if it doesn't appear as though it's needed).

"Vincent Xu [MSFT]" wrote:

Hi,

Honestly, it is a weird issue. The reason I suggest you run sidname is

that

I'd like to make sure the sid can be resolved at the same time you see

SID

in ACL. Please let me know the results in detail (If there are any

error

messages.)

Thanks.

Best regards,

Vincent Xu

Vincent –

Thanks for
the help.
136.167.2.233
is also a DC
(we have 4).

136.167.2.235

has all the
domain
level
operations
masters, but
it is not a
GC. A

different

DC has the
forest wide
operations

RE: SIDS show instead of user names

RE: SIDS show instead of user names

masters and
the other 2
are GCs. I

again

want to
stress that
there is no
WAN
involved
and only
one AD
domain,

so

there

is plenty of
connectivity
with the
GCs, etc.

I did not use
the
Sid2name
tool because
I got the
impression
that you

wanted

me to use it
to confirm
whether or
not the
accounts
were
deleted.

Since

I

know the
accounts
were not
deleted
(remember,

RE: SIDS show instead of user names

I was able
to see them

remotely

using
showacl), I
didn't use
Sid2name.
See my
latest
response to

Paul

Bergson
below. He
suggested I
run LDP
from the
server. I did
that

and

was

able to see
every user
name in a
particular
OU. If you
still think

that

I

should run
Sid2name,
let me
know.

Regards.

"Vincent
Xu
[MSFT]"
wrote:

RE: SIDS show instead of user names

Hi,

Thanks
for
sending
me
the
trace
data.

I
also
found
that
in
SID.cap,
it
contacts
136.167.2.235
and
in

Name.cap, it

contacts
136.167.2.247.
However,
I
found
in
Name.cap,
an
IP:

136.167.2.233.

What
IP
is
this?

Since
the
problem
seems
to
be
related
to
136.167.2.235,
I

RE: SIDS show instead of user names

suggest

you

shutdown
this
DC
temporarily
to
see
if
the
problem
happens
again.

Also,
did
you
see
the
tool
sid2name
I
attached?
I'd
like
to
suggest

you

run

it
when
the
problem
occurs
to
verify
at
the
same
time,
if
the
sid

can

RE: SIDS show instead of user names

RE: SIDS show instead of user names

be

resolved.
The
syntax
like:

Sid2name
S-1-5-21-583907252-688789844-725345543-1344

Let
me
know
the
detailed
output.

Thanks
for
the
help.
I
may
not
be
able
to
get
to
this
today,
but

I

certainly

will
do
the
NetMon
trace.
I
was
thinking
of
using
NetMon,
but
it

will be

very
helpful
for
someone
else
to
look

RE: SIDS show instead of user names

RE: SIDS show instead of user names

at
the
output.

As
far
as
the
accounts
being
deleted
in
AD,
keep
in
mind
that

this

affects

every
single
account
(other
than
the
one
I'm
logged
on
with)
in

every

ACL

and

group,
so
I
already
know
that
isn't
the
problem.
Even

RE: SIDS show instead of user names

RE: SIDS show instead of user names

if
I
add
a

new

account

to
a
group,
that
user's
name
disappears
as
soon
as
I
click
OK.

Xu
[MSFT]"
wrote:

Hi,

Thanks
for
your
reply
and
clarifying.

Let's
perform
some
troubleshooting
steps:

2.
Please
use
the
tool
sid2name.exe
tool

RE: SIDS show instead of user names

(attached)
to
determine
the
name
of
those
unknown
accounts.
Please
run
the

below

one-by-one
and
check
the
output:
