Hi,

I am absolutely certain that I the passwords meet
complexity requirements.

If that is the case you would be able to change the password.

How about running net accounts off this machine that will tell you what
it thinks the password should require.

Please post the results here. Right off the bat I am guessing that
either complexity is enabled, you have a minimum password age set, or
you have replication issues.

Good luck

Harj Singh

Did you ever find a resolution to this as I am having exactly the same
problem with several users?
