I have three servers running Windows 2003 Standard Edition SP1.

These are Win 2k3 SP 1 servers. In order to make them R2 you have to install R2. Run setup2 from the second disk.

Then you go into add remove programs etc....

I have three servers running Windows 2003 Standard Edition SP1. I purchased a Windows 2003 Storage Server R2 to Replicate important data to for backup purposes.

Problem

according to MS I should be able to go under add/remove windows components and select DFS. Wrong... It is not any of the three original servers. It is on the Windows Storage Server.

How do i install the component so I can set up replication.

I do have the DFS GUI under admin toolson the originals but no service is installed.
