Hey All!

When creating a new computer object, we change the 'users/group can join this computer to a domain' option from 'Domain Admins' to 'Authenticated Users'.

I'm trying to accomplish it with a script as shown below. If I leave out the defaultgroup line, the object gets created. When run with the defaultgroup I get an error – a constraint violation occurred. Am I using the correct attribute ('defaultGroup') to accomplish this and if so how do I fix it? If not, which attribute do I use?

Thanks

GHG

```
Set objComputer = objContainer.Create("Computer", "cn=" &
strComputer)
objComputer.Put "sAMAccountName", strComputer & "$"
objComputer.Put "Description", strDescription

                objComputer.Put "defaultGroup", "Authenticated Users" <<

objComputer.Put "userAccountControl", 4096
objComputer.SetInfo
.
```
