Hello CAC.MCCTELECOM,

No idea, sorry. Think about to talk to MS support, especially with the UNIX part, maybe it is known.

Best regards

Meinolf Weber

Hello, Meinolf.

Hm, no Cisco Call Manager installed on the domain controller, but we've got Windows Services for Unix (SFU) v3.0.

While googling for the error:

Add error on line 1327: Unwilling To Perform

The server side error is "Schema update failed: attribute in may-contain does not exist.

we found that SFU v2.0 had a hotfix, available from

<http://support.microsoft.com/kb/293783>. Unfortunately, this hotfix is only for SFU v2.0, and the version installed in the domain controller is v3.0. The hotfix does not allow to be installed over SFU v3.0.

Out of desperation, we even tried to install SFU v3.5, but that didn't fix the problem.

Anything else we could try?

Best regards,

Jose Luis.

Hello CAC.MCCTELECOM,

Check this article about other software that has modified the schema:
<http://support.microsoft.com/kb/924175>

Is there additional software installed except exchange?

Best regards

Meinolf Weber

Dear all,

I'm trying to upgrade a Windows 2000 Server domain to Windows Server 2003 R2. While I'm running the command adprep /forestprep in the 2nd CD to upgrade the Windows 2000 domain controller, I get the following error:

Add error on line 1327: Unwilling To Perform
The server side error is "Schema update failed: attribute in may-contain does not exist."
84 entries modified successfully.
An error has occurred in the program
ERROR: Import from file C:\WINNT\system32\sch31.ldf failed. Error file is saved in ldif.err.31.
In the ldif.err.31 file it appears the following text:
Entry DN:
CN=IpProtocol,CN=Schema,CN=Configuration,DC=ederfil,DC=local
Add error on line 1327: Unwilling To Perform
The server side error is "Schema update failed: attribute in may-contain does not exist."
An error has occurred in the program
Additionally, the ADPrep.log file showed a text stating that Adprep correctly verified if Windows Services for Unix were installed or

Re: Error while trying to upgrade to a Windows 2003 R2 domain

not, and that it verified that hotfix Q293783 was not applied. The Windows 2000 DC has Windows Services for Unix v3.0 installed, and so several hotfixes available from Microsoft, such as 919938 and 293783, which apply for Windows Services for Unix v2.0, are not useful here, as far as I know (anyway I applied them, but to no avail).

I have tried upgrading Windows Services for Unix up to version 3.5, but still I cannot apply the sch31.1df upgrade.

Has any of you encountered a similar problem? Is there any additional hotfix I could try? Any suggestions would be much appreciated.

Best regards,
Jose Luis.
