Hi.

No GinaDLL.

I can get it to work, on almost all servers, i cant do it on Exchange server.

But still, it dies for few hours.

So, Task Manager is working, it just block every few hours. Then i try that fix with perf. counters and performanse logs and alerts service and its working again.

Maybe NTBackup is killing it ? Cauze thats happening when ntbakup stales (need another backup dlt which cant be provided in the moment) so there are like 1000+ messenger (popup) alerts.

I realy dont understand this ...
