Hi I have just installed a school with 2003 server ,how can I set it up so the workstations auto instal the printer (which is setup on the server)I am having to add printer for every user (and we have a lot of users) on every PC (which are XP Pro)I thought if I set ip up for one user it would auto set it up for all.I have gave all permissions and group policy for it ,but I still have to do it manually.  
Any help Please
