I have setup SUS on Windows SBS 2000 server (SP4) and it all appears to be synchronising and downloading the updates with no problems. However, my XP SP1 workstations are not getting the updates from the server.

I have set SUS up on other sites, and the only noticeable difference on this site is that the server running the SUS has a secure certificate installed, therefore needs to be accessed via https.

I have set the clients to download the updates from <https://servername> but they do not appear to be getting anything.

Can anyone help please?
