| I hope someone can help.

|

| The hardware i am using is an IBM X225 Server, but i do not think its  
| hardware related.

|

| I have built a box, with 2K server on it. It works fine. No problems at  
| all.

|

| This is a master box, where an image will be taken (using drive image pro)  
| and deployed to other boxes of the same spec.

|

| If i restore the image to the same hardware the image was taken from, it  
| will boot up to the logon screen and then get stuck in a loop saying  
| loading

| your personal settings, saving your personal settings.

|

| I have no idea how to fix this!!

|

| Can anyone give me any ideas how to stop this? I need to get this software  
| build out asap!!

|

| Regards,

| Mark.
