Hi,

I have a PC running Win2k pro. I have created a user and put her in the built-in "Users" group. She is unable to view image files with Microsoft Photo-Editor. When she tries, she gets a series of the following errors - "No file format information can be found in the Registry", "Unknown File Format", and "PhotoEditor cannot find or open C:\temp\filename.jpg".

I think this is a security issue, because if I log on as an administrator, I have no problem looking at images in PhotoEditor. I'd like to limit the rights of the "Users" group as much as possible for security purposes, but I do want my "Users" to be able to look at images in PhotoEditor. Can anyone tell me what I have to do to give them this right?

Thanks,
Paul
