true. I don't normally care what tools people use. However this is a big one when it comes to dns diag. Most folks here that really know their stuff use dig more and can spot errors a lot easier (at least I can.) The default display of nslookup does not give you the tools. Then you need to remember the switches to go deeper and that output is uggy.

But your right, use the tools you got or feel good about. However, helpers may ask for the dig output.
