Thank you for your reply but I know how to activate the logging option... This is the first thing I tried. I am talking about the debugging option as referred in article 235689. Look at the sample, it's clearly not something out of the logging function.

I have tried all the other possibilities for 7062 but this article open a new possibility (we have 1100 domains registered but only about 300 defined on our DNS servers).
