Open Fax Service Manager (Start | Run | Fxsadmin.msc), right click on Fax (Local), click on properties, go to the Security Tab and set the ACLs there. Note that if you remove Everyone:Fax from this list, WS2k3 Fax won't work unless you explicitly add NetworkService:Fax to the list. So, basically, you need permissions for NetworkService. By default Everyone includes NetworkService, hence the default setting won't explicitly add NetworkService to the list.

All other group settings will work fine.

Thanks,
Anand
