

Moving the boot directory to another partition

I would seldom do this, and because of that, like everything else it is more simple said than done...

Can anyone comment on the easiest way to make a copy of my c:\win2000 boot directory to d:\win2000 in order to change the boot.ini and do some testing while booting to d:\win2000.

Of course, when using XCOPY with all the appropriate switches (including /C to ignore errors) it gives "sharing violations" while running NT.

I noticed that the recovery console does not offer an XCOPY equivalent...

This may be an OLD question, but what is the best and most simple way to make a copy of the directory to the d:\ drive?

Any comment is appreciated...
Thank.
