First, what desired result do you not get? Second reread my last post.

As i mentioned in last message, pay attention to the "apply onto" list box.

<http://www.windowsitlibrary.com/Content/592/files/Fig7.gif>

File permissions always override folder permissions.

<http://www.windowsitlibrary.com/Content/592/files/Table5.gif>

Apply separate permissions to the AA folder and its contents, though it will  
create extra CPU activity. Then override BB.

If AA denies and BB inherits, the full control on BB is overridden.
