Lots of hits in a Google search for this.

Might want to try Spybot or Ad-aware first.

Good luck.

I have a virus, It seems nobody heard about this one. It creates à entry in the

register : video process that launches an application called sysconf.exe. It the classic smtp engine stuff. I lost access to all antivirus websites unless I

delete the entries made in the hosts file.

etc.

But my problem is that even if I delete all of the above it keeps coming back.

Anyone heard of tthat worm ?
