We are running Windows 2000 SP4 on one of our servers. FOr some reason this server is not showing the events being logged in the "system" log! If I clear the log file, no problem, I will start to see the events. However currently the "system log" is showing a total # of events present of 2,659 when refreshed, but does not list the actual events! The view pane is blank!

Thsi happens all the time. Is this a known issue? If so, is there a fix?

Thanks,

Brad
