Please can someone help me!!!

Im using W2k Pro.

I installed the spk4 and 3 updates 2 nights ago.
My machine now is extremely slow. Looking at the Task
Manager its 100% CPU
The process is System running at 100%
I have got all the updates of Windows Update.
I have done an online Virus Scan and pics up nothing
I have done a normal Scan with another virus manufacturer
nothing.
I have also check for all Adware and there is nothing.

PLEASE SOMEONE HELP ME.

I can get into Safe Mode fine. I know its got do with Spk4
I have re-installed spk4. Didnt make a difference.
I have read up on this issue, and I heard Microsoft has a
hotfix for this issue, but you have to pay for it. I dont
see why I have to pay for it, if its the spk4 fault.

I also read that, you can break down the system process by
using pcviewer but I cant use my w2k CD as it wont work in
SafeMode to install the tools on it.

Please can someone help me and tell me, what I can do
about this issue. I also read it could be an incompatible
driver, but my device driver is fine.
Please help me.

Can
