>Hello all,

Though I'm still working on that, your suggestions are really great clues.
Many thanks for all you guys.

One last question is :

Actually, the foxpro pgm doesn't really update the win registry(that is why I just copied and pasted from old server to new server), so will it become a concern for win2K registry internally ? Also, any ways that I can trace/check the permission right change in this case ?
>

I find that the best way to investigate permissions issues is to run the Filemon and Regmon utilities from www.sysinternals.com
