Hi All,

I have Win2k Server, with Exchange 2000 Server installed and with all latest Service packs and all updates.  
>From last 3, 4 days my server gets hangs and i have to restart the server.After restarting i See many error logs in Event viewer with Event ID:2019, Source: Srv, Desc: The server was unable to allocate from the system nonpaged pool because the pool was empty.

I am not able to understand what is the problem, because there are many reasons for that problem.

Then i run stinger to find any virus, i found natsky virus in Badmail folder, so i deleted all files from that BADmail folder. so is it because of those virus badmail folder?? or any other reason the server hangs..??  
Please help me ..

Jaan
