Hello,

I'm running a quite few computers that run dual disks, windows 2000, and linux.

And I was wondering is there a way, to disable the shutdown option on the log on screen, and when your logged on.

I know you can disable the 'shutdown' buttons, But we are avoiding on people pressing the 'power/restart' buttons on the computers themself.

At night times, we have a sysadmin for linux, and hes running a 'Grid' during the night. And he wants the pcs (approx 40 of them) all online, after we all go home.

That the students stay here until 9pm at the most. They sometimes press the shutdown and shut down the computer, or press the button on the casing.

We get very annoyed.

It's not good when they have shutted down. And the grid gives out errors.

But yeah, anyways.

Is there a way to disable all of the shut down options. And just have a restart option on the logon screen on windows 2000,

Thanks  
Pete

Have a 'restart' only on the log on screen.
