I have three computers connected through a wireless router ... an XPHome desktop, a 2000Pro desktop, and a 2000Pro laptop. All three can access the internet through the router. XPHome and 2000P laptop can see and communicate with each other but not with 2000Pro desktop. When I attempt to query the workgroup from 2000Pro desktop, I get "RWG is not accessible. The list of servers for this workgroup is not currently available." (RWG is the workgroup name).

Any/all help will be greatly appreciated.
