| I have a Windows 2000 Standard server with SP4 that is a member server of a
| SBS 2003 domain. I have a data directory that nobody including the domain
| administrator has access to. I get access denied when trying to
change/delete

| this folder or any of its child folders and files using the domain
| administrator account.

| Also, the domain administrator can not change the access rights and only
| has read permission when trying to change the access rights.

| I have no idea how this happened. Is there a way to reset access rights to
a

| default setting? I was able to copy the contents of the folder to a new
| folder and the new folder works corectly for the access settings. I would
| just like to delete the folder that gives me the error.
