Hi all,

I have a Dell Latitude C400 laptop with Windows 2000 as the OS.

When I start up and logon with the LAN cable attached, my login is completed in about 30 seconds, and there are no issues accessing network files, etc.

Occasionally, I need to take the laptop home. When the LAN cable is not attached, logging on to Windows can take up to 25-30 mins, before the desktop will appear.

After searching for sometime, I found an article that suggested disabling the LAN card, which I did, but this has not made any difference to the problem.

Can someone suggest how to modify the "Offsite" hardware profile, so that login is cut down to a more reasonable time ?

Many thanks

GW

.
