Hi

I am running Windows 2000, and experienced a crash this afternoon whilst upgrading a program. After the machine restarted, I was unable to re-connct to my broadband provider. I have deleted all connections and created anew, but each time after waiting at "Verifying username and password" for quite a long period of time, I get the error message as shown in the title, i.e.

"Error87: The parameter is incorrect"

Any idea what I need to do to cure this? Many thanks!

.
