I installed Windows 2000 professional with the login option as "System assumes you are the only user who will login....etc. etc." (I don't recall the exact wordings).

Now when I start the windows the system does not ask me for login and password and it boots up without the login/password. But when I lock the system and want to login again, I have to enter the password. I want the system to ask me even when I boot it up the first time. Otherwise, even if I lock the system, anyone can just turn the power off and turn back on and enter the system without login/password. Please help me how I can force the system to ask for the login and password when I start (boot up) the system first time. I don't want to re-install the system since I have already installed many software, service packs, security updates etc.

Thanks.....

.
