thanks.

## Re: How to run a job every hour using dos at command?

Is there a way to run scheduled task in a scripted way. The user interface is nice, but if I want to setup similar jobs on another computer, I have to reenter all those key strokes. Also, I have not been succesful in scheduling taks from the user interafce, gives me some error invalid login/password even when I am usig default system login.

.
