John,

When I'm in the "cmd" prompt and doing the "reg add /?" without the quotes of course, it gives me the 'reg' is not recognized as an internal or external command, operable program or batch file. I've never heard of reg.exe version 2.0 or newer – where does that come from? I have SP4 and the highest update after that, so I would assume that my files would be updated to the latest and greatest.

Terry

Re: Registry Add Commands

REG_EXPAND_SZ /d %windir%\System32\qmgr.dll
