You may need to explicitly call a scripting engine. Something like;

```
cscript scriptname.extension
```

| Hello,

|

| I'm trying to monitor free disk space using Performance Monitor. If the  
| free space falls below a certain value I have an email.vbs script I  
| want kicked off to let me know about it.

|

| An alert was created on Windows 2003 server using the Logical Disk Free  
| Space counter. I set the actions to "Log an entry in the application  
| event log" and "Run this program" (c:\scripts\email.vbs). I can run  
| email.vbs from the command line and from windows using cscript and  
| wscript.

|

| -----!!!  
| When running out of disk space Perfmon creates the event in the event  
| log but the script doesn't run.

|

| -----!!!  
| These are generated in the event log.

|

| Event ID 2031 = Counter: \\MYComputer\LogicalDisk(C:)\% Free Space has  
| tripped its alert threshold. The counter value of 28.0766666666667 is  
| under the limit value of 20000.

|

| Event ID 2038 = Unable to execute command " for the Free Disk Space

Re: Perfmon script not working??

| alert. The alert will continue as scheduled. The error code returned  
| is in the data.

|  
| Wha am I missing?

|  
| Thanks in advance
