Hi,

I cannot browse [www.microsoft.com](http://www.microsoft.com) and most of its sub links  
If I try 'ping [www.microsoft.com](http://www.microsoft.com)', it returns

Pinging [www.microsoft.com](http://www.microsoft.com) [127.0.0.1] with 32 bytes of data:

Reply from 127.0.0.1: bytes=32 time<10ms TTL=128

Ping statistics for 127.0.0.1:

Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),

Approximate round trip times in milli-seconds:

Minimum = 0ms, Maximum = 0ms, Average = 0ms

My system is installed with Windows 2000 Professional with SP4 rollup 1, and also IIS is installed. While IIS service is running, if I try to browse [www.microsoft.com](http://www.microsoft.com), it asks for username and password. The IE address bar automatically change the website name to <http://www.microsoft.com/localstart.asp>. If stop the IIS website and ftp service, it shows page cannot be displayed. How can I overcome this issue?

I cannot browse most of the Microsoft sites. In some pages, it shows asp.net 2.0 framework's requested resource not found error message.

Vijayakumar
