Make sure that these services are running:

COM+ Event System
Remote Access Connection Manager
Remote Procedure Call (RPC)
Telephony
System Event Notification
Network Connections
Plug and Play

John

Thanks for the above.

They are now nearly all running, I used the utilities Codestuff Starter and Whats Running to between them identify and check all above. The exception is Remote Procedure Call (RPC) RPC Locator. I tried to enable it but it won't. There is another Remote Procedure Call (RPC) RPC Ss that is running.

I rebooted, still no luck. When I lost the icon, I had only disabled 2-3 items, one IIRC was MS Webcheck, don't see it now.

Advice?

Mike

In-line.

ms wrote:

In an earlier post, I asked about deleting several processes.

I disabled the wrong process and lost my system tray DUN icon. DUN still works fine from my desktop icon, but when connected, it does not now show up in the system tray.

I tried enabling processes that were disabled from some time in the past.

These services show as stopped and will not enable:

Windows Net Meeting for Remote Desktop

You don't need that.

Windows Messenger

You need that even less...

Net Logon

You don't need that either.

How to enable these services?

How to get my system tray DUN icon back?

Re: Need to enable several processes

How about Right-click on the icon, select Properties
|Shortcut | Find
Target and Right-click the target again to see what is
available. Or
you can access it through the Control Panel | Network and
Dial-up
Connections.

The thing is handled by Rasphone so you can also just go to
Start
Menu
| Run and type rasphone in the dialogue box and click OK.
Select
the connection and click on properties. There you will see a
check
box at the bottom, Show icon in taskbar...

John

TIA

Thanks, John, just the data I needed.

But, no luck.

Exactly as you said, ran rasphone, but in my DUN screen, "show icon
in taskbar" is *already* enabled. I also started with the desktop
shortcut, got to the same screen, same result.

I goofed somehow, disabled something this AM that now it does not
show up in the taskbar, of course I tried reboot, no luck.

I did disable MS Webcheck early this AM, now can't find it, could
this be it?

Thanks,

Mike
