Check Event Viewer for errors. When you view the logged events in Event Viewer (double-click them in the right-hand pane) in the upper right corner, third button down is a copy to clipboard, then you can paste in the body of a reply message.

Please do so for each of the different System Log events (that are a Type: 'Error' or 'Warning') since last boot so we can see all of the event detail.

Also check Device Manager for error codes and or non-starting devices.

This is a bit confusing. Are you trying to install a driver or reinstall Windows? If the latter;

To do a clean install, either boot the Windows 2000 install CD-Rom or setup disks. The set of four install disks can be created from your Windows 2000 CD-Rom; change to the \bootdisk directory on the CD-Rom and execute makeboot.exe (from dos) or makebt32.exe (from 32 bit) and follow the prompts.

Setup inspects your computer's hardware configuration and then begins to install the Setup and driver files. When the Windows 2000 Professional screen appears, press ENTER to set up Windows 2000 Professional.

Read the license agreement, and then press the F8 key to accept the terms of the license agreement and continue the installation.

When the Windows 2000 Professional Setup screen appears, all the existing partitions and the unpartitioned spaces are listed for each physical hard disk. Use the ARROW keys to select the partitions Press D to delete an existing partition, If you press D to delete an existing partition, you must then press L (or press ENTER, and then press L if it is the System partition) to confirm that you want to delete the partition. Repeat this step for each of the existing partitions When all the partitions are deleted press F3 to exit setup, (to avoid unexpected drive letter assignments with your new install) then restart the pc then when you get to this point in setup again select the unpartitioned space, and then press C to create a new partition and specify the size (if required). Windows will by default use

Re: 2nd installation W2K needed for rootkit problem

all available space.

(in lieu of this just format the partition you wish to install Windows 2000 to.)

Be sure to apply SP4 and these two below to your new install before connecting to any network. Internet included. (sassser, msblast)

[http://download.microsoft.com/download/E/6/A/E6A04295-D2A8-40D0-A0C5-241BFECD095E/W2KSP4\\_EN.EX](http://download.microsoft.com/download/E/6/A/E6A04295-D2A8-40D0-A0C5-241BFECD095E/W2KSP4_EN.EX)
