Thanks for your response on this topic,

What you told me helped a little as it made some sense out of something's. My big issue is, there a way for a person who has rights from one folder such as Template, can that person copy into a another folder where they have no rights to copy at all.

That is what my problem is, I would like to allow them to copy say a folder yet not give them the rights to look into other folders. We have a lot of folders that these managers will be creating and then moving into the 2006 folder. I have two users who have modify rights but it would be easier if the manager can move the folder there themselves with out the two users doing it.

Thanks  
Adam Raff

Hi ,

Actually:

When a file is copied from one location to another location, whether on the same or different volume, a new file is created in the destination location. The file inherits the permissions, the Access Control List (ACL), from its parent folder.

When a file is moved from one location to another on the same volume, the file retains its security descriptor. Only the pointer to the resource is modified.

When a file is moved from one location to another on a different volume, it

Re: Permission Question

acts similar to the copy, except the file is deleted from the source location. The moved file inherits the permission from the parent folder.

Hope the information helps.

Best regards,

Good Day,

I have a permission question that I feel I know the answer, but I want to make sure that there is no other way around this that I may not be aware

Re: Permission Question

of

Prodcommg folder on Testserver  
Bryan folder – Full rights to Bryan plus inherit  
Carlos folder – Full rights to Carlos plus inherit  
Sue folder – Full rights to Sue plus inherit  
-----  
Common Production folder (CPF) – inherit rights Plus Mary  
and Eve  
has full rights  
template CG – inherit from CPF plus CG has full rights  
Template CK – inherit rights from CPF plus CK has full  
rights  
Template SC – inherit rights from CPF plus SC has full  
rights  
2005 folder – inherit rights from CPF Mary and Eve  
2006 folder – inherit rights from CPF Mary and Eve  
Template SC – Copied from Common Production folder  
Template CK

As you can see from my example above in Common  
Production folder we have

two

(Mary and Eve) users that have full or modify rights from  
that folder and  
below via inherit permissions.

When Mary copies the template of SC to the 2006 folder, the  
rights also

copy

over so that SC can access the folder so he can add or delete  
files. CK  
would not be able to access SC folder since he would not  
have the proper  
rights.

Since Mary has full rights she can copy the folder with no  
issue into the  
2006 folder because of inherit rights. SC would not be able  
too, since  
SC  
does not have full/modify rights to the 2006 folder.

Once Mary copies SC Template over to the 2006 folder, then  
SC can enter

Re: Permission Question

and

modify data within that folder because the permission are copied with the folder.

My question with the above example is as follows

Is there a way that we can have SC copy her template over to the 2006

folder

with out giving her full rights. We do not want SC to view or look into

any

other folder except her own template?

My gut feeling is No, but I may be wrong and there may be another way with advanced permissions of which I do not use that much.

Thanks  
Adam Raff
