Win2k gurus,

Does anyone have an idea as to why I must hit Fn+SysRq to enable the keyboard at the win2k login screen?

Info:

Dell inspiron 2500

Win2k SP4

3 user system [it does it for everyuser]

ctrl alt delete to login

The system does not seem to have any other problems but this added step at login seems unusual.

Thanks for any info.

Desmoduck
