There is a system service which needs to be disabled, or at least the process killed. I have tried logging in as administrator and even then I am unable to terminate it.

The Stop / Pause option for the service is grayed out. Is there any way around it?

Thank you in advance.

I have tried stopping from services.msc but it does not work (buttons are grayed out). It is a firewall service. I need to temporary disable it as it is interfering with an application.
